

(a) one period of the cell

- $V(t)$ of the cell ($N=1$), from the stored centre
- section point: $V=s$, crossed upward, $t=0$

(b) Fourier coefficients of V

- $|\hat{V}_m|$ of the centre, $0 \leq m \leq K=32$
- $(r_{\text{ex}}/4)e^{-m/4}$: bound on $|\hat{V}_m - \hat{V}_m^{\text{centre}}|$
- $m=K$; the centre has no mode $m > K$
