

(a) period along the curve of orbits

(b) first Fourier coefficient of V 

(c) Floquet multiplier bound

(d) detail of (b) at the Hopf point

- G_{Ks} branch: piece $\times$ enclosure (712 pieces)
- Hopf bridge: enclosure of $G_{Ks} \times$ enclosure (68 pieces)
- Hopf point g_H (enclosure of width 2×10^{-13})
- Erhardt's numerical Hopf value 0.027907858929580
- - - $G_{Ks} = 0.02778$: the two families share this orbit

- (c) uniform bound on a unit (127 units)
- ◆ (c) bound at a single G_{Ks} (6 points)
- (c) no uniform bound: the points only
- - - (c) modulus 1
